

FIBER OPTIC STAR CEILING LIGHT INSTALLATION INSTRUCTIONS

SAFETY INFORMATION:

Our fiber optic lighting kits carry no heat or electricity, making them safe to touch and perfect for wet or humid environments where conventional lighting would be dangerous. Please note that the light source is not waterproof and must be installed in a watertight area. Waterproof enclosures are available if required.

REQUIRED TOOLS AND MATERIALS:

Hand Drill

Star Ceiling Kit

Silicone Sealant

Ceiling End Fitting

NOTE: We do not suggest the use of superglue as it can cause the fiber tails to become brittle and susceptible to breakage, resulting in a loss of light. Please install each illuminator in an accessible location that allows each cable to reach the ceiling with 60cm of slack.

STEP 1:

Drill a small hole the same size as the diameter of the ceiling end fitting.

STEP 2:

Insert the end piece through the hole from the below ceiling and screw it.

STEP 3:

Insert the fiber cable into the end fitting and secure the fiber cable in place with silicone sealant. Allow the sealant to dry.

STEP 4:

Insert the plug into the power socket. Installation is complete.

INSTALLATION GUIDE - STAR CEILING KITS WITH NO CEILING END FITTING

STEP 1:

Drill a small hole with the same diameter as the fiber cable on the ceiling

STEP 2:

Insert the proper sized fiber cable through the hole from the above ceiling, allowing it to protrude about 3-4mm into the room. Then secure the fiber cable in place with silicone sealant. Allow the sealant to dry. Finally insert the plug into the power socket. Installation is complete.

FIBER OPTIC STAR CEILING LIGHT

Create a starry night on your bedroom, bathroom or any room in the house by using our fiber optic star ceiling kit on your ceiling. Our star ceiling kits allows you to do just that!
